Minimal and targeted use of material, as well as the suggestion to change perspective, establish Apart, an object of curiosity.

Apart is made from only one piece of sheet steel, the lasercuted and folded silhouette already includes mounting points.

Giving new perspectives to surroundings and to oneself, the observer is animated to interact and experiment with unexpected and surprising new visual points of view.

Puristic, true to the material and with no intention to hide any traces of the production process, this mirror object is well balanced between application related product and iconic piece.
