In a time, in which the areas of working and living, are getting closer and closer together, we are looking for flexible design solutions that allow optimal use of the existing spatial resources.

Parat is a series of mobile table frames in various sizes. Main focus lies in utilizing simplicity as a concept to extend practicality, allowing it to flexibly serve the needs for working and living spaces. All objects in the series can be dismantled flatly.

The tripodal parat trestle can be assembled without needing additional tools and is combinable with any kind of tabletop. The parat table frame can be mounted with only four screws. Should more storage space be needed, a tray area and suitable trays can be added. This allows you to set it up according to your needs. In comparison to other more complex multiparted systems, the parat table system focuses on essential needs and easy handling.
